

FiberMat® is a combination of polymer-modified asphalt emulsion, chopped fiberglass strands, and quality crushed aggregate. It can be used as a Chip Seal Surface Treatment (Type A) or as an Interlayer (Type B), designed to delay and minimize reflective cracking.

Benefits & Features

- Open to traffic within minutes
- Minimizes and delays reflective cracking
- Enhances compaction of new asphalt overlay
- Waterproofs the underlying pavement
- Up to 50% increase in pavement life
- No wrinkles or tears compared to fabrics or geotextiles
- Increases tensile strength and flexibility
- 100% Recyclable

Applications

- Highways
- Streets and Roadways
- State and Metro Parks
- Asphalt and Concrete Pavements
- Milled and Non-Milled Surfaces
- Airport Runways and Taxiways
